

Assignments

Arrays – 1

Q1. Calculate the product of all the elements in the given array.

Solution:

```
#include <iostream>
using namespace std;
int main() {
    int arr[5]={1,2,3,4,5};
    int pdt = 1;
    for(int i=0;i<5;i++){
        pdt = pdt*arr[i];
    }
    cout<<pdt;
    return 0;
}
```

Q2. Find the second largest element in the given Array in one pass.

Solution:

```
#include <iostream>
using namespace std;
int main() {
    int arr[6]={12 ,35, 1, 10, 29, 1};
    int max1=max2=INT_MIN;
    for(int i=0;i<5;i++){
        if(max1<a[i]){
            max2=max1;
            max1=a[i];
        }
        else if(max2<a[i] && a[i]≠max1){
            max2=a[i];
        }
    }
    if(max2==INT_MIN){
        cout<<"No second element exists"<<endl;
    }
    else cout<<max2<<endl;
    return 0;
}
```

Q3. Find the minimum value out of all elements in the array.

Solution:

```
#include <iostream>
using namespace std;
int main(){
    int arr[5] = {1,2,3,4,5};
```

```
int min = INT_MAX;
for(int i=0;i<5;i++){
min = min(min,arr[i]);
}
cout << min;
return 0;
}
```

Q4. Given an array, predict if the array contains duplicates or not.

Solution:

```
#include<iostream>
using namespace std;
int main() {
int arr[5]={1,2,2,4,5};
bool flag = false;
for(int i=0;i<5;i++){
for(int j=i+1;j<5;j++){
if(arr[i]==arr[j]){
flag = true;
cout<<arr[i];
break;
}
}
}
if(flag==false) cout << "No duplicate";
return 0;
}
```

Q5. WAP to find the smallest missing positive element in the sorted Array that contains only positive elements.

Solution:

```
#include<iostream>
using namespace std;
int main() {
cout<<"enter 5 elements of the array"<<endl;
int a[5];
for(int i=0;i<5;i++){
cin>>a[i];
}
int x=0;
bool flag=false;
for(int i=0;i<n;i++){
if(a[i]!= x){
cout<<x<<endl;
}
```

```
flag=true;
break;
}
else x++;
}
if(flag==false) cout<<x<<endl;
return 0;
}
```

Q6. Predict the output.

```
int main(){
int sub[50], i ;
for ( i = 0 ; i ≤ 48 ; i++ ) ;
{
sub[i] = i ;
cout<<sub[i]<<endl ;
}
return 0;
}
```

Solution:

49

**THANK
YOU !**
